

# CASE STUDY

## IT SECURITY

We were approached by a multi-award winning communications consultancy offering specialist expertise in reputation management, financial public relations, as well as political & regulatory affairs and crisis communications.

With high profile clients in the financial and political sectors, the client has access to highly sensitive information. With an increasing number of cyberattacks targeting UK companies, they were concerned with the security of their client's data and documents and wanted to test the security of their own systems.

As a top IT security consultant in London, Cubit Technology was asked to perform a Penetration Test (Pen Test) and Vulnerability Scanning to evaluate the security of their systems. Cubit conducted an authorised simulated cyberattack to identify both the strengths and weaknesses including the potential for unauthorised parties to gain access to the system's features and data. Cubit was able to complete a full risk assessment in order to provide further security recommendations.

If you're looking to change IT providers, Cubit Technology may be the right choice for your business. Call us at **020 3535 0680** to find out how we can help.
