

Datto SaaS Protection

is a cloud-to-cloud backup and recovery solution designed to protect critical data stored in SaaS (Software-as-a-Service) applications such as Microsoft Office 365 and Google Workspace.

Even when data has been deleted from MS365 or Google Drive, we can use Datto SaaS protection to retrieve the required files from the backup.

Key features include:

Automated backups

backs up data at regular intervals, ensuring that the most up-to-date version of the data is always available for recovery.

Granular restore

allows for quick and easy recovery of specific files, folders, or even individual emails, contacts, or calendar items.

Advanced reporting

detailed reports and insights on backup status, recovery times, and storage usage.

Overall

Datto SaaS Protection provides additional peace of mind – the knowledge that work in progress, sensitive files and client data from today, yesterday, last week or many years ago is all protected, backed up, and recoverable in case of a data loss event.
