

Email Archiving

Our Email Archiving solution preserves emails and their related attachments for future reference.

It takes a copy of all email messages and other important communications and saves them in a centralised repository.

This process serves several purposes:

- **Compliance with regulatory requirements**
- **Facilitating e-discovery**
- **Reducing the risk of data loss**
- **Improving email management and productivity**
- **Long-term access to important information**

If an employee's emails are deleted from the mail server – accidentally or deliberately – we can restore them from the archive.

Automatic archiving of all incoming and outgoing email messages eliminates the need for agency administrators to perform archive-related tasks. In the cloud, all data is stored securely, unalterably and completely.
