Cubit
## TECHNOLOGY

KnowBe4

KnowBe4 is a cybersecurity awareness and training platform designed to educate employees on how to detect and avoid cyber threats. The platform provides training in the form of interactive modules, simulations, and assessments.

Regular training will raise the level of awareness, the perception of risk and consequently change behaviour so that people think about an incoming communication instead of automatically trusting it.

KnowBe4's training covers a wide range of topics, including

- **Phishing attacks**
- **Social engineering**
- **Malware**
- **Ransomware**
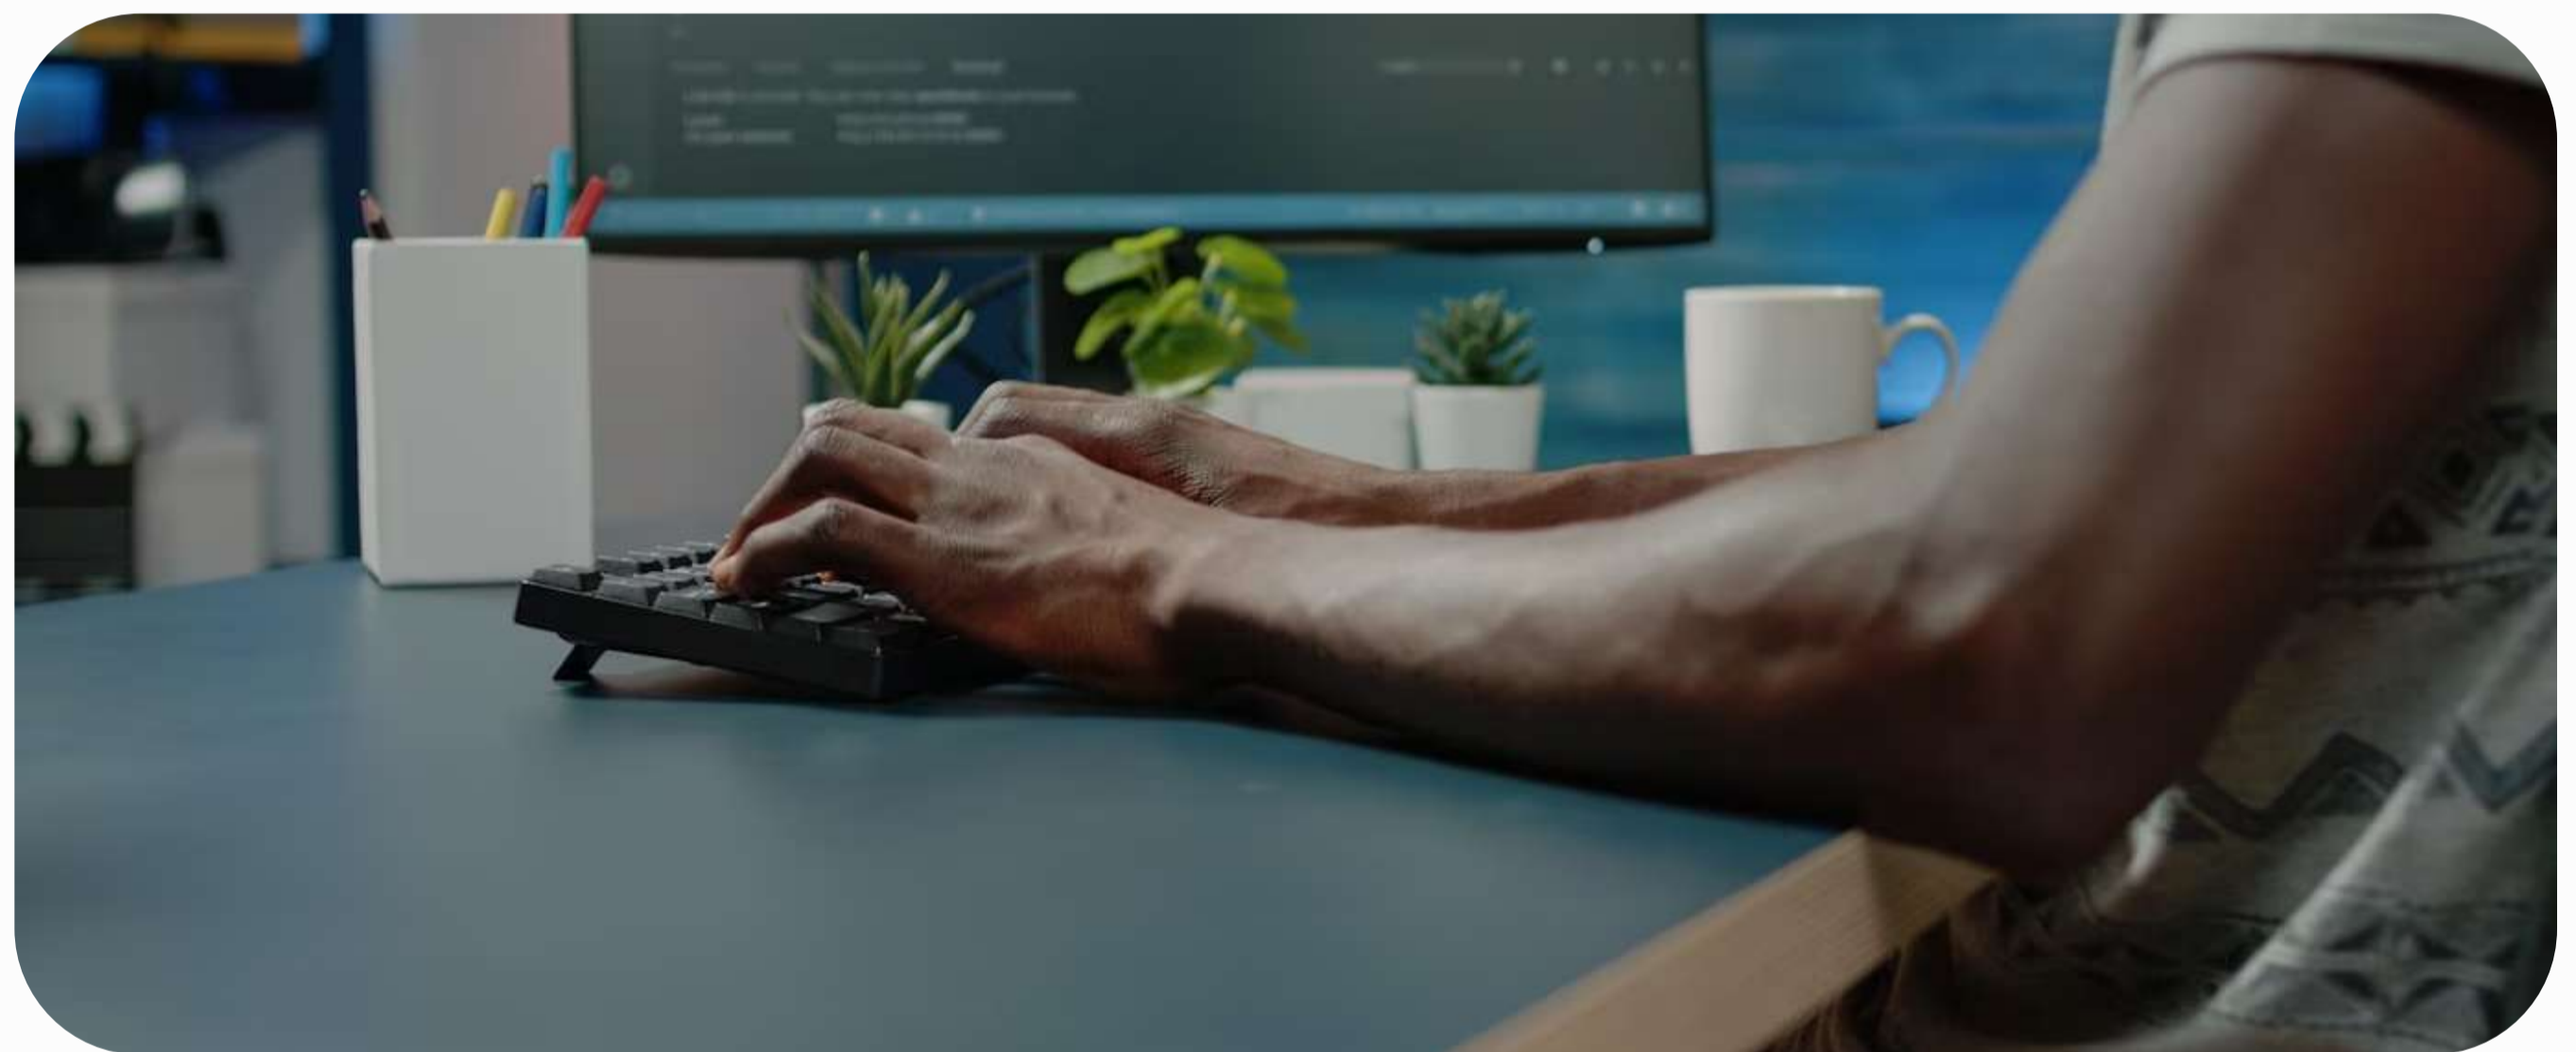

The training modules are designed to be engaging and interactive, using real-life scenarios and examples to help users understand the risks and consequences of cyber threats.

The platform offers various tools and resources, such as phishing simulations, risk assessments, and customizable training campaigns so Cubit can help you create and implement effective cybersecurity awareness programmes.

Overall

KnowBe4 reduces the risk of cyberattacks by improving the awareness of employees and free-lancers about cybersecurity threats and best practices. Your organisation's greatest security weakness can be trained to become its greatest defensive strength.
