

PrinterLogic SaaS

PrinterLogic is a cloud-based print management solution that allows us to manage an organisation's printers remotely. Unlike an on-premises solution, PrinterLogic does not require any local hardware or server infrastructure, so it's an ideal solution for a business without the resources to house a physical print server.

Using PrinterLogic, our team can manage printer deployments, driver updates, and configuration changes from a central web-based console so it gives us a single point of control for print management, just like an on-premise print server. This means we can prevent many printing problems from occurring in the first place. When an issue does arise we can diagnose and solve it more quickly, usually without a site visit.

The solution includes features such as:

-  **Secure pull printing**
-  **Mobile printing**
-  **Reporting and analytics**

These all help us to streamline print workflows and reduce your operating costs.
