

Safetica NXT

Safetica NXT is Data Loss Prevention (DLP) software designed to help organisations protect sensitive data from being accessed, shared, or stolen – either by insiders or external parties.

NXT provides features to monitor, detect, and prevent data breaches, including:

Content-aware DLP

machine learning algorithms to scan and classify sensitive data, such as personal information or financial data, and create rules for its handling.

User behaviour analytics

analyses behaviour and establishes baselines to identify abnormal activity.

Endpoint and cloud protection

can monitor and protect data on endpoints, such as laptops and mobile devices, as well as cloud storage and collaboration tools, like OneDrive or Google Drive.

Incident response and forensics

provides detailed reports and alerts for incidents, enabling security teams to quickly respond and investigate any security breaches.

Safetica NXT helps organizations comply with data protection regulations, such as GDPR or ISO27001 and reduce the risk of data breaches caused by human error or malicious activity.
